DETAILED ACTION

Response to Request for Reconsideration

Rejections Repeated

1. The obviousness-type double patenting rejection of claims 1, 4 over US 6,514,628 has been repeated for the same reasons previously of record in the Office action dated 07/07/04.
2. The obviousness-type double patenting rejection of claim 30 over US 6,228,457 has been repeated for the same reasons previously of record in the Office action dated 07/07/04.
3. The 35 U.S.C. 102(e) rejection of claims 1-6, 30 as being anticipated by US 6,228,457 has been repeated for the same reasons previously of record in the Office action dated 07/07/04.
4. The 35 U.S.C. 103(a) rejections of claims 1-7, 10-11, 13-15, 18-40 over Fukuyoshi as the primary reference, have been repeated for the same reasons previously of record in the Office action dated 07/07/04.

Response to Arguments

5. Applicant's arguments filed 07/01/2005 have been fully considered but they are not persuasive.

Rejection under doctrine of obviousness double patenting

6. Applicant argues that claims 1, 4 of the present application each require that the first metal constituent in the layer be present in an amount of 0.1 to 3.0 percent, and that neither of the two [prior art] references would anticipate the lower limit of the indicated range of 0.1 weight

percent, such that neither reference provides adequate disclosure to support a rejection under the doctrine of obviousness double patenting.

‘628 claims a reflector with Ag as a main component; 0.5 to 3.0 wt % of Pd, which overlaps with the presently claimed range of 0.1 to 3.0 wt % of Pd, and 0.1 to 3.0 wt % of a third element selected from the group consisting of Ta, Ni. Thus the reflector of ‘628 overlaps the reflecting layer presently claimed by Applicant. Therefore the rejection stands.

Rejection under 35 U.S.C. 103(a)

7. Applicant argues that Fukuyoshi discloses a silver based layer having a 0.06 weight percent of Cu, which is 0.04 weight percent below the 0.1 weight percent which forms the lower boundary of the claimed range, and therefore is not within the range presently claimed.

Applicant is respectfully apprised that the Fukuyoshi teaches a range of 0.1 to 3 atomic percent of Cu (copper) and Au (gold) (‘853, column 11, lines 40-50), which translates into a range of 0.06 to 0.18 weight percent of Cu and Au, which overlaps the claimed range of 0.1 to 3.0 weight percent. Thus the weight percent range of Fukuyoshi overlaps the claimed range of Applicant. Therefore the rejection stands.

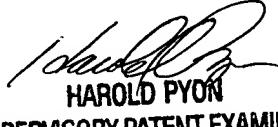

8. Applicant’s argument regarding the rejection of claim 12 rests on the argument regarding the validity of Fukuyoshi as the primary reference used to rejection dependent claim 7. The argument has been addressed above.
